

Modifying the netplan to add interfaces and VLANs

Below is an example of the default netplan file to add an additional unnumbered interface.

```
root@docker-app-1:~# cat /etc/netplan/00-installer-config.yaml
# This is the network config written by 'subiquity'
network:
  ethernets:
    ens160:
      addresses:
        - 10.128.50.10/24
      nameservers:
        addresses:
          - 1.1.1.1
          - 1.0.0.1
        search: []
      routes:
        - to: default
          via: 10.128.50.1
    ens192: {}
  version: 2
```

Below is an example of the default netplan file to add an additional unnumbered interface with an attached unnumbered VLAN.

```
network:
  ethernets:
    ens160:
      addresses:
        - 10.128.50.10/24
      nameservers:
        addresses:
          - 1.1.1.1
          - 1.0.0.1
        search: []
```

```
routes:
  - to: default
    via: 10.128.50.1
  ens192: {}
version: 2
```

```
vlan40:
  id: 40
  link: ens192
```
